this material has been copied and communicated to you by or on behalf of the University of Western Australia pursuant to Part VB of the *Copyright Act 1968 (the Act)*.

The material in this communication may be subject to copyright under the Act. Any further copying or communication of this material by you may be the subject of copyright protection under the Act.

**Do not remove this notice.**

**Note: all Web references in these Powerpoint slides verified as at 8-Jul-20**

- A. Why Computer Ethics?**
- B. Some Ethical/Moral/Social Issues**
- C. Intellectual Property**
- D. Requirements of a Professional**
- E. Australian Computer Society Code of Ethics**
- F. ACS Code of Professional Conduct**
- G. Case Studies**

## **Aims:**

- 1. Give an understanding of the variety of ethical issues you may confront.**
- 2. Impart an appreciation of the complexity of many of these issues.**
- 3. Help you to see you do have a responsibility, and to whom.**
- 4. Introduce the Computer Society Code of Ethics/Conduct as a basis.**
- 5. Introduce a Framework for addressing ethical issues.**

## ❖ Technology has Consequences – You Can't Ignore Them:

### ➤ Samuel Johnson, 1759:

Integrity without knowledge is weak and useless, and knowledge without integrity is dangerous and dreadful.

### ➤ Albert Einstein, 1931:

It is not enough that you should understand about applied science in order that your work may increase man's blessings. Concern for man himself and his fate must always form the chief of all technical endeavours.

### ➤ Norbert Wiener, 1950:

The new industrial revolution is a two-edged sword. It may be used for the benefit of humanity... It may also be used to destroy humanity, and if it is not used intelligently it can go very far in that direction.

### ➤ Rogerson & Bynum, 1995:

Computing Technology is the most powerful and most flexible technology ever devised. For this reason, computing is changing everything – where and how we work, where and how we learn, shop, eat, vote, receive medical care, spend free time, make war, make friends, make love.

## ❖ Computing Creates New Situations:

### ➤ Walter Maner (1976):

**Computer ethics = moral problems that are created, aggravated or transformed by the introduction of computer technology.**

### ➤ James Moor (1998):

**Computers are logically malleable:**

**--> applied in unpredictable and novel ways**

**--> situations & choices not previously arising**

**--> policy vacuums.**

**Values permeate our lives – help us make decisions. We don't always agree about all values, but many we do (eg what makes for a “good” program? – no universal agreement, but some convergence).**

- ❖ **Rationale for studying computer ethics (Maner, 1995):**
  - **it makes us behave like responsible professionals.**
  - **it teaches us how to avoid computer abuse and catastrophes.**
  - **advances in IT will create policy vacuums.**
  - **some problems (eg Intellectual Property) are radically and permanently altered.**
  - **IT creates novel ethical issues that require special study.**
  - **these novel issues are large enough and coherent enough to define a new field.**

- ❖ **Example situation where moral/ethical choices have to be made (Moor, 1998):**
  - **Spectrum of actions by a Web site impacting a user's computer/smartphone when they use their Web Browser to access that site:**
    - a. do not change user's computer at all.
    - b. allow user to decide if a cookie is to be left on the user's computer or not.
    - c. leave a cookie on user's computer but inform them it's there.
    - d. leave a cookie on user's computer without their knowledge.
    - e. removal of data from user's computer without their knowledge.
    - f. arbitrary destruction of data on user's computer.

**Note that, in Europe, you are now required to get user consent before leaving a cookie on their system.**

## 1. Be Clear What Ethics is Not:

- It is not the same as Feelings
- It is not Religion
- It is not following the Law
- It is not following Culturally Accepted Norms
- It is not science.

## 2. Approaches to Deriving Ethical Standards:

- Utilitarian approach
- Rights approach
- Fairness or Justice approach
- Common Good approach
- Virtue approach

## 3. Decision Framework:

- Recognise there is an Ethical Issue
- Get the Facts
- Evaluate Alternative Actions - Which Action Will:
  - ☆ Produce most good, do least harm? [utilitarian]
  - ☆ Best respect rights of all stakeholders? [rights]
  - ☆ Treat people equitably? [fairness]
  - ☆ Best serve the community as a whole? [common good]
  - ☆ Lead me to being the sort of person I want to be? [virtue]
- Make a Decision and Test it
- Act and Reflect on the Outcome

From: <https://www.scu.edu/ethics/practicing/decision/framework.html>

## Characteristics of Computers :

- powerful, fast => magnifying effect
- manipulate information => a new kind of tool
- new, evolving => don't understand them fully
- logically malleable => applied in novel, unusual ways
- have memory => adaptive, unpredictable
- complex => even programmers don't understand their programs
- programs can't be proven to be correct, & not 100% reliable => untrustworthy (yet we rely on them)
- minor errors can produce catastrophic results => non-proportional effects
- pervasive, cheap => effects are very widespread
- copies that are identical to the original => ownership rights issues
- introduce spatial and temporal separation => break the chain of responsibility, facilitate anonymity
- ...

**Computing Technology is the most powerful and most flexible technology ever devised**

- **Software Errors:**

- ☆ Are you responsible for any and all errors found in your software?
- ☆ What if someone else has modified your software – who is responsible then?
- ☆ What if an error only emerges 10 or 20 years later – are you still responsible?

- **Copying Video/Music/Image Files:**

- ☆ Is it actually “theft” even when the owner still has the file?
- ☆ Is it OK if you just want to “borrow” the file?
- ☆ Is it OK if you copied it to see if it was worth buying?

- **Software Ownership:**

- ☆ Do the arguments that no-one should “own software” have any merit?
- ☆ How much of someone else’s software can you re-use without their permission?
- ☆ Is it OK to reverse-engineer someone’s software?

- **Email Issues:**

- ☆ When is it OK to forward or broadcast someone else’s email?
- ☆ Are there situations where anonymous email is legitimate?
- ☆ Is it ever OK to send out thousands of copies of an email?
- ☆ Is “chain email” harmless and so OK?

- **Hacking:**

- ☆ Is there a clear line between “white hat” and “black hat” hacking?
- ☆ If hacking reveals flaws in someone’s computer security, isn’t that a good thing?
- ☆ If people don’t protect their files, does that mean they’re OK to copy, etc?

- **Viruses:**

- ☆ If your co-workers don’t update their virus protection, isn’t that their fault?
- ☆ Is a virus that doesn’t actually damage computers ever OK?
- ☆ If a virus exposes system weaknesses, isn’t that therefore OK?

- **Privacy:**

- ☆ Is it OK to photograph/video someone and then distribute that photo/video?
- ☆ When is it OK to “photoshop” a photo of someone or something?
- ☆ If a photo or image is available on the Web, then is it OK to copy and use it?

- **Software Development:**

- ☆ How much software testing is enough to clear you of blame for errors?
- ☆ If your “client” wants something that is “unreasonable” can you just ignore it?
- ☆ How important is it to stick to your estimates for how long it will take?

## Computers and/or software failure have been implicated in:

- Hole in ozone layer undetected for 7 years.
- US Air Force Blackhawk helicopter crashes – 22 deaths.
- Therac-25 cancer radiotherapy machine – 4 US deaths (1985-7).
- 1<sup>st</sup> Gulf War Dhahran base Scud attack – Patriot failure (25-Feb-91).
- Hubble Telescope error compounded by computer shut-down (9-Dec-91).
- Three Mile Island (nuclear reactor) (28-Mar-79).
- Chernobyl (nuclear reactor) (26-Apr-86).
- Challenger Space Shuttle deaths (28-Jan-86).
- Mt Erebus Air NZ flight 901 crash (28-Nov-79).
- Korean Air Lines flight 007 over Sakhalin Island (1-Sep-83).
- HMS Sheffield sinking in Falklands (4-May-82).
- Iranian flight 655 shot down over Persian Gulf (3-Jul-88).
- Stock market crash due to automated trading in 1987.
- Australian Census Website Failure 9-Aug-16.
- Australian Tax Office Website Failure 5-Jul-17.
- Passport system failure delays flights 29-Apr-19 and again on 15-Jul-19.

... etc – a serious study can be made of computer disasters (eg Peter Neumann's Risks Digest - <http://catless.ncl.ac.uk/Risks/>).

## Who is to blame when computer systems fail?

Cartoon depicting computer blaming  
human error “yet again”  
[[www.cartoonstock.com](http://www.cartoonstock.com)]

Cartoon depicting people committing suicide because of dramatic downturn in profitability only to discover it was caused by computer error  
[[www.cartoonstock.com](http://www.cartoonstock.com)]

Cartoon depicting committee being  
advised the computer failure was due  
to someone walking on a sidewalk  
crack

[[www.cartoonstock.com](http://www.cartoonstock.com)]

## Why is Software so prone to Catastrophic Failure?

- Complexity
- Error Sensitivity – non-linear, non-continuous (non-proportional)
- Hard to Test
- Correlated failures
- Lack of professional standards – few software engineers
- Development methodologies have been inadequate
- Proving software correctness has not been successful
- Verification attempted by:
  - ☆ mathematical analysis;
  - ☆ case analysis;
  - ☆ extensive testing; or
  - ☆ combination of the three.
- Tony Hoare’s “Wasted 20 Years” trying to establish a basis for proving program correctness.
- Roger Needham’s “Most Surprising Development in the 50 years of Computer Science” – that, on a regular basis, we would use software known to have significant numbers of bugs.

## Robbie the Killer Robot

- Industrial Robot killed its operator: who was implicated?
  - ✧ Programmer had made an error in the relevant program
  - ✧ Operator did not follow instructions correctly
  - ✧ Supervisor did not ensure operator was adequately trained
  - ✧ Management cutting corners

See [www.onlineethics.org/Resources/Cases/killerrobot.aspx](http://www.onlineethics.org/Resources/Cases/killerrobot.aspx)

### More recent actual deaths:

- Volkswagen car manufacturing robot kills worker 2-Jul-15:  
<https://www.washingtonpost.com/news/worldviews/wp/2015/07/02/a-robot-killed-a-factory-worker-in-germany-so-who-should-go-on-trial/>;
- Tesla robot-driven car driver killed 7-May-16:  
<https://www.theguardian.com/technology/2016/jun/30/tesla-autopilot-death-self-driving-car-elon-musk>.
- Uber self-driving car kills pedestrian 18-Mar-18:  
<http://www.abc.net.au/news/2018-03-20/uber-suspends-self-driving-car-tests-after-fatal-crash/9565586>
- Wikipedia self-driving car fatalities page:  
[https://en.wikipedia.org/wiki/List\\_of\\_self-driving\\_car\\_fatalities](https://en.wikipedia.org/wiki/List_of_self-driving_car_fatalities)

**Robots throw some of these issues into strong relief:  
I, Robot**

**Metropolis**

**Terminator**

Pictures of various humanoid robots, mostly from movies.

**Blade Runner**

**Humans**

**Asimo**

**Star Wars**

**Ex Machina**

## Robots throw some of these issues into strong relief:

Pictures of various industrial robots, eg cars, vacuum cleaners, assembly-line manufacturing, bomb disposal, stock trading.

- **Asimov's 3 Laws of Robotics:**

- 1. A robot may not injure a human being or, through inaction, allow a human being to come to harm.**
- 2. A robot must obey orders given it by human beings except where such orders would conflict with the First Law.**
- 3. A robot must protect its own existence as long as such protection does not conflict with the First or Second Law.**

- **Inadequacy of this Ethical Framework:**

- ✧ **Unintended consequences.**
- ✧ **“Greater good” aspects (humanity as a whole vs individual humans).**
- ✧ **Failure to see long-term consequences.**
- ✧ **Some outright failures.**
- ✧ **Complexity of ethical judgements (and fragility of trust).**

See Kuipers, Benjamin: *Towards Morality and Ethics for Robots, 2016 AAAI Spring Symposium on Ethical and Moral Considerations in Non-Human Agents*

<https://web.eecs.umich.edu/~kuipers/research/pubs/Kuipers-sss-16.html>

## Therac-25 Radiation Treatment Machine (1985-1987)

- Machine malfunction produced overdoses (100x)
- 4 or 5 patients died as a result of the failure
- Operators ignored error messages: “Malfunction 54”
- No immediate effects noticed
- Manufacturer safety procedures inadequate
- FDA tests inadequate
- Remediation efforts paltry
- Software error eventually discovered

See <http://staff.washington.edu/jon/pubs/safety-critical.html>

## Hierarchy of Policies to Guide Conduct:

- international treaties & agreements
- national laws
- government/agency regulations
- standards of good practice (within a whole industry)
- professional codes of ethics (within a professional association)
- corporate policies (within an organisation/corporation)
- community & personal values (unwritten common practices)

Terrell Ward Bynum (1997)

- **2 Scenarios:**
  - ☆ **New medical graduate, just starting out in a medical practice:**
    - ▶ **expected to “act professionally”**
  - ☆ **New high school graduate, taking a job as a cashier at Coles:**
    - ▶ **expected to “act professionally”**
  - ☆ **What’s the difference?**
  - ☆ **To which is a new computing graduate closest?**
  
- **Abraham Flexner (1915) on medical professionalism:**
  - ☆ **It is basically intellectual, carrying with it high responsibility**
  - ☆ **It is learned in nature, because it is based on a body of knowledge**
  - ☆ **It is practical rather than theoretical**
  - ☆ **Its technique can be taught through educational discipline**
  - ☆ **It is well organised internally**
  - ☆ **It is motivated by altruism**

- **Criteria:**

- ☆ **Established body of specialised knowledge**
- ☆ **Formal accrediting criteria**
- ☆ **Undertake decisions on behalf of clients**
- ☆ **Defined performance standards**
- ☆ **Members committed to maintain performance standards, knowledge**
- ☆ **Acceptance of responsibility**
- ☆ **Standards of conduct/ethics (=> disciplinary procedures)**
- ☆ **Recognition in society – high level of trust**

- **Summary:**

**professionals are people who have specialised knowledge on which others (and the public in general) have to place dependence; the public have to trust those professionals in regard to their specialised knowledge.**

**Viz: TRUST => RESPONSIBILITY**

## ACS Code of Ethics:

- As an ACS member you must uphold and advance the honour, dignity and effectiveness of being a professional. This entails, in addition to being a good citizen and acting within the law, your adherence to the following Society values:
  1. The Primacy of the Public Interest
  2. The Enhancement of Quality of Life
  3. Honesty
  4. Competence
  5. Professional Development
  6. Professionalism
- This Code of Ethics applies to all ACS members regardless of their role or specific area of expertise in the ICT industry.
- The Code of Ethics should be adhered to in conjunction with the Code of Professional Conduct

<https://www.acs.org.au/content/dam/acs/acs-documents/Code-of-Ethics.pdf>

## ACS Code of Ethics detail:

1. The Primacy of the Public Interest  
**You will place the interests of the public above those of personal, business or sectional interests.**
2. The Enhancement of Quality of Life  
**You will strive to enhance the quality of life of those affected by your work.**
3. Honesty  
**You will be honest in your representation of skills, knowledge, services and products.**
4. Competence  
**You will work competently and diligently for your stakeholders.**
5. Professional Development  
**You will enhance your own professional development, and that of your colleagues and staff.**
6. Professionalism  
**You will enhance the integrity of the Society and the respect of its members for each other.**

## ACS Code of Professional Conduct

[https://www.acs.org.au/content/dam/acs/rules-and-regulations/Code-of-Professional-Conduct\\_v2.1.pdf](https://www.acs.org.au/content/dam/acs/rules-and-regulations/Code-of-Professional-Conduct_v2.1.pdf)

### 1.2.1. The Primacy of the Public Interest

- The public interest takes precedence over personal, private and sectional interests
- Any conflicts should be resolved in favour of the public interest
- In your work, you should safeguard the interests of your immediate stakeholders, provided that these interests do not conflict with the duty and loyalty you owe to the public.
- The public interest is taken to include matters of public health, safety and the environment.

## ACS Code of Professional Conduct (cont)

### 1.2.2. The Enhancement of Quality of Life

- The development of ICT has had a significant impact on our society and way of life.
- Whilst this impact has been beneficial to a very great extent, like all technologies, ICT has also had some negative effects, and will continue to do so.
- An ethical approach to your work will help to recognise and minimise these adverse effects.
- You should promote equal access to the benefits of ICT by all members of society.

## ACS Code of Professional Conduct (cont)

### 1.2.3. Honesty

- Do not breach public trust in the profession or the specific trust of your stakeholders.
- Observance of utmost honesty and integrity must underlie all your professional decisions and actions.
- Circumstances will undoubtedly arise during the course of your professional career where it may appear to be beneficial for you to be deceptive in some way.
- This type of behaviour is not acceptable professional conduct.

## ACS Code of Professional Conduct (cont)

### 1.2.4. Competence

- Accept only such work as you believe you are competent to perform.
- Do not hesitate to obtain additional expertise from appropriately qualified individuals where advisable.
- You should always be aware of your own limitations and not knowingly imply that you have competence you do not possess.
- This is distinct from accepting a task of which the successful completion requires expertise additional to your own.
- You cannot possibly be knowledgeable on all facets of ICT but you should be able to recognise when you need additional expertise and information.

## ACS Code of Professional Conduct (cont)

### 1.2.5. Professional Development

- Keep yourself informed of such new technologies, practices and standards as are relevant to your work.
- Others will expect you to provide special skills and advice; and in order to do so, you must keep your knowledge up-to-date.
- You should encourage your staff and colleagues to do the same.
- Take action to ensure that your hard-won knowledge and experience are passed on in such a way that the recipients not only improve their own effectiveness in their present work, but also become keen to advance their capabilities and take on additional responsibilities.

## ACS Code of Professional Conduct (cont)

### 1.2.6. Professionalism

- The ICT industry is relatively new and characterised by rapid change. It has not had the opportunity to evolve over many years and acquire its own standards and legislation.
- The ACS is endeavouring to improve public confidence in the ICT industry.
- It is imperative that members of the Society maintain professional standards that improve and enhance the industry's image, especially in the workplace.
- All people have a right to be treated with dignity and respect.
- Discrimination is unprofessional behaviour, as is any form of harassment.
- Members should be aware that the ACS can help them resolve ethical dilemmas.
- It can also provide support for taking appropriate action, including whistle-blowing, if you discover an ACS member engaging in unethical behaviour.

## ACS Code of Ethical Values:

1. The Primacy of the Public Interest
2. The Enhancement of Quality of Life
3. Honesty
4. Competence
5. Professional Development
6. Professionalism

This Code is currently being revised (in view of the rapid changes in ICT over the 5 years since it was last reviewed).

The Revised Code (Ethical Values) may be based around the following 3 Values:

1. Honesty
2. Trustworthiness
3. Respect (for Others, for the Profession)

Does this seem a viable way forward? Can all the characteristics of a professional (eg as in the Code of Professional Conduct) be covered by these 3 primary Values?

## Case Studies Illustrating Many of these Issues:

- Each case involves various aspects of the Codes and/or ethical or social issues.
- They are mostly based on actual cases.
- Analyse each case for the following:
  1. identify those to whom you owe any kind of duty;
  2. assess the extent of harm potentially incurred by each person or category;
  3. assign priorities to the duties owed;
  4. identify possible alternatives;
  5. seek opportunities for negotiation and formation of “social contracts”.
- Note that, since decisions are based on value judgements, there will be differences of opinion at times...

Social Contract Theory: <http://www.iep.utm.edu/soc-cont/>

## Aircraft Industry Quality Control Manager Quandary

- Testing on a new aircraft was possibly inadequate
- Company is pressuring QC Manager to “sign off”
- Delays may cost the company business, him his job, etc
- Test pilot knows his job is risky anyway
- Danger to the test pilot and to other victims of any crash
- “Social Contract” approach – to whom does the Quality Control Manager have a “contract of responsibility”? Which should take precedence? How to choose between them?

See McFarland, Michael C: “Urgency of Ethical Standards Intensifies in Computer Community”, IEEE Computer, March 1990, pp77-81

Social Contract Theory: <http://www.iep.utm.edu/soc-cont/>

Cartoon depicting a dog surfing the Internet, saying to another dog: "On the Internet, no-one knows you're a dog".

The New Yorker, July 5, 1993, page 61.

## **Identifying Author of Anonymous Message**

- **You are the Systems Administrator at your medium-sized Company.**
- **Your Company has set up an Anonymous on-line Discussion Forum to encourage employee discussion/participation.**
- **The Forum frequently receives postings which are critical of Company policies, practices, etc.**
- **Your boss asks you to identify the author(s) of these postings (which you are able to do, using your system privileges).**
- **What do you do?**
  1. **Just agree?**
  2. **Argue the toss with the Boss, but then agree?**
  3. **Take the matter higher?**
  4. **Use the existing Forum to ensure this first gets wide publicity within the Company?**
  5. **Go to the local Press with the story?**
  6. **Take some other action? What?**

## CITS3200 Ethics Case Studies:

- This is a set of simple Case Studies designed to help you understand some of the Ethical Issues you may face as a computer professional.
- Your responses will be recorded and aggregated with others from the 2020 CITS3200 Class (they will be kept anonymous).
- Average responses will be published in a table later this Semester (with comparisons from earlier years).
- You may suspend answering at any time and resume later.

This Survey is available here:

[http://uwa.qualtrics.com/jfe/form/SV\\_6DnHaKB3CTTZLuZ](http://uwa.qualtrics.com/jfe/form/SV_6DnHaKB3CTTZLuZ)

Or can be accessed via the CITS3200 Website

<https://teaching.csse.uwa.edu.au/units/CITS3200/lectures.html>

**Note that a “reasonable” number of you must attempt this Survey before the next lecture is released (due 17-Aug)**

## **END OF LECTURE 1**

**Lecture 2 will be released on 17-Aug  
(provided enough of you have attempted the  
Case Study Survey)**

## Issues:

- Copyright Act
- Moral Rights
- Digital Agenda Amendments
- Fair Dealing, Section VA/B
- Attribution, Plagiarism
- Software Licences
- Shrink-Wrap Licences, Web Extensions
- Employer *versus* Employee Rights
- Patents
- Public Domain: Shareware, Freeware
- Open Source Movement
- Website Contents: Linking, Deep Linking, Framing, Copying
- Copying Music, Movies, Images

## Copyright Act 1968

- Ownership of copyright in an original work is automatic
- May need to prove it at some time
- Rights: to make copies, sell, distribute, change, etc
- Works (expression of an original thought, idea): writing (prose, poetry, drama, etc), graphics, audio & video recordings, music, designs, software, ...
- Software made explicit in 1984
- Digital Agenda amendments 2001
- Australia is signatory to Universal Copyright (Berne) Convention
- Moral rights: authorship acknowledged, content not distorted
- Duration: 70 years after death of author, 75 after creation for corporate works (“Mickey Mouse” provisions: 70 and 95)
- Key is potential value to author/creator
- Relationship to Patent

- **Contractual obligation** – may over-ride normal copyright
- **Employer rights** – based on terms of employment
- **Student rights** – based on University IP Policy
- **Shared rights** – where shared effort/resources are contributed
- **Using the resources of others** – gives them some rights
- **Insubstantial portions** – can quote small amounts from works
- **Quoting, Attribution** – give credit to author
- **Plagiarism** – deliberate or accidental use of others' works without attribution
- **Implied permission** – where the context suggests copying/distribution is expected
- **Temporary copying of electronically communicated works** – store-and-forward, caches, auto-backup, memory, computer screen
- **Fair Dealing** – for private use in study, research – limited amounts
- **Educational purposes under section 113P (formerly part VB)** – special provisions for use in official courses, upon payment of a fee
- **Public domain software** – freely available, distributed
- **Shareware** – free to trial, distribute, not for long-term use
- **Licences** – over-ride, extend Copyright conditions

## Digital Agenda (2000)

- ✧ Mainly didn't change anything, just clarified
- ✧ New right of "communication"
- ✧ Applies to Emails, Web pages, etc
- ✧ Is it now illegal to forward emails?

## Web Pages

- ✧ A Web page is a "work"
- ✧ Linking to another Web page – not an infringement
- ✧ "Deep linking" is this an infringement?
- ✧ Framing – making it look like it's yours
- ✧ "Passing off"
- ✧ Obtaining permission of owner – is it always required?
- ✧ Web page "terms of use" – must you observe these if they exist?

ABC News Website 18-Nov-03  
University Students Convicted of Music  
Piracy

From: <http://www.abc.net.au/news/2003-11-18/suspended-sentences-over-music-piracy/1510900>

See also <http://www.smh.com.au/articles/2003/02/01/1043804571225.html>

## Sample Defences of Illegal Downloads:

- Everyone's doing it
- We won't get caught
- The music industry charges too much
- They should make it impossible to copy
- It doesn't hurt anyone
- It only hurts a company, not a person
- Musicians are being exploited by multinationals
- The listening public is being exploited
- It helps increase sales
- Music should be free
- I can't afford to pay for it

**Is “file sharing” always a “bad thing”?**

### Ethical Tests:

- What laws govern the situation?
- Who gains and who suffers?
- Would you be happy for your action to be publicised?
- Would you tell your boss what you're doing?
- Would you tell your parents?
- What would you think if it was done to you?
- Does it violate Trust? Integrity? Truthfulness? Gratitude? Justice? Kindness?
- Are you treating others with respect?
- What if everyone did the same?

- Kabay: *The Napster Cantata*

## Some believe that all music should be free:

- Yes: “A true musician produces music because they love it, not because they're hoping to make money out of it.”
- No: “If music were free then how will the musicians put food on their table?”

<http://www.debate.org/opinions/should-music-be-free>

## Some believe that all software should all be free:

- Yes: “software should be written for the joy of helping others, not for money; and it costs nothing to make a copy, ie the ‘cost of manufacture’ is zero.”
- No: “It costs time and effort to write software and developers have to make a living somehow.”

<http://www.debate.org/opinions/should-software-be-free-to-download>

Some believe that all writing should be free...

Cartoon depicting a child saying the grades in his report card can be fixed by photoshopping.

[www.cartoonstock.com](http://www.cartoonstock.com)

## Digital Photograph Manipulation

- It's simple now for various forms of image “enhancement” to be made, eg:
  - ✧ Red-eye elimination
  - ✧ Cropping
  - ✧ Special effects (eg sepia-colour)
  - ✧ Wrinkle removal
  - ✧ Changing the contents in significant ways
- Is there anything wrong with “touching up” an image?
- What kind of “touching up” might be OK, in what circumstances? What might be wrong? Why?

## Collecting Email Addresses

- Gilles Plains Primary School project 10/4/02 (see below)
- This *\*could\** be legitimate, but also *\*could\** be a great scam to collect (real) email addresses.
- What other anti-social aspects does this have?
- How could it be modified to allay such suspicion and still achieve its alleged goal?

We are Year 6 students at Gilles Plains Primary School, situated in Adelaide South Australia.

Our teacher, Mr Small is helping us with this project. We have decided to map the progress of an e-mail. We are interested in finding out "Where in the World' our e-mail will go. We are starting our project on April 8 2002 We would appreciate your help. If you receive this message, we ask that you:

1. Email us back at [gillesplains@hotmail.com](mailto:gillesplains@hotmail.com) and tell us your location, by suburb city, state and country. We will plot these locations on our map.
2. Forward this e-mail and send it to everyone on your address list. They, in turn, they can send it to all their contacts. This will help us to reach as many people as possible. After collecting the e-mail messages and plotting them on a map, we will graph the number of responses we have received by state and country. With your help, this project will be a very exciting learning experience for us.

Thank you.

Amy Davis-Herbison and Nikolai Gor

NB a similar email on 11/3/02 claimed to come from Year 8 students at Taonui School, located near Feilding, NZ...

- How to identify Fake News: <https://www.freedomforuminstitute.org/first-amendment-center/primers/fake-news-primer/>

Subject: BAD virus - act quickly!!

Date: Tue, 29 May 2001 21:57:22 -0400

Subject: Please Act Urgently

VIRUS COULD BE IN YOUR COMPUTER

It will become activate on June 1st and will delete all files and folders on the hard drive.

No Anti-Virus software can detect it because it doesn't become a VIRUS until 1/6/2001.

It travels through the e-mail and migrate to your computer.

To find it please follow the following directions:

Go To "START" button

Go to "Find" or "Search"

Go to files and folders

Make sure to search in drive C

Type in; SULFNBK.EXE

Begin Search

If it finds it, highlight it and delete it

Close the dialogue box

Open the Recycle Bin

Find the file and delete it from the Recycle Bin

You should be safe.

The bad part is you need to contact everyone you sent ANY e-mail to in the past few months.

Cartoon depicting someone asking if a colleague can see if a virus on a floppy disk also ruins their computer.

[www.tedgoff.com](http://www.tedgoff.com)

## Responsibility for Virus Protection

- To establish whether staff are clicking on phishing attempts or not, you could design a \*test\* - send a false phishing email around and see how many clicked on it.
- Eg Belgian Government in 2015: but it went badly wrong because many people contacted the “free giveaway” company to complain about being asked to provide credit card details, but that company knew nothing about it (no-one had cleared it with them).

See <http://www.networkworld.com/article/2951514/security/belgian-government-phishing-test-goes-offtrack.html>

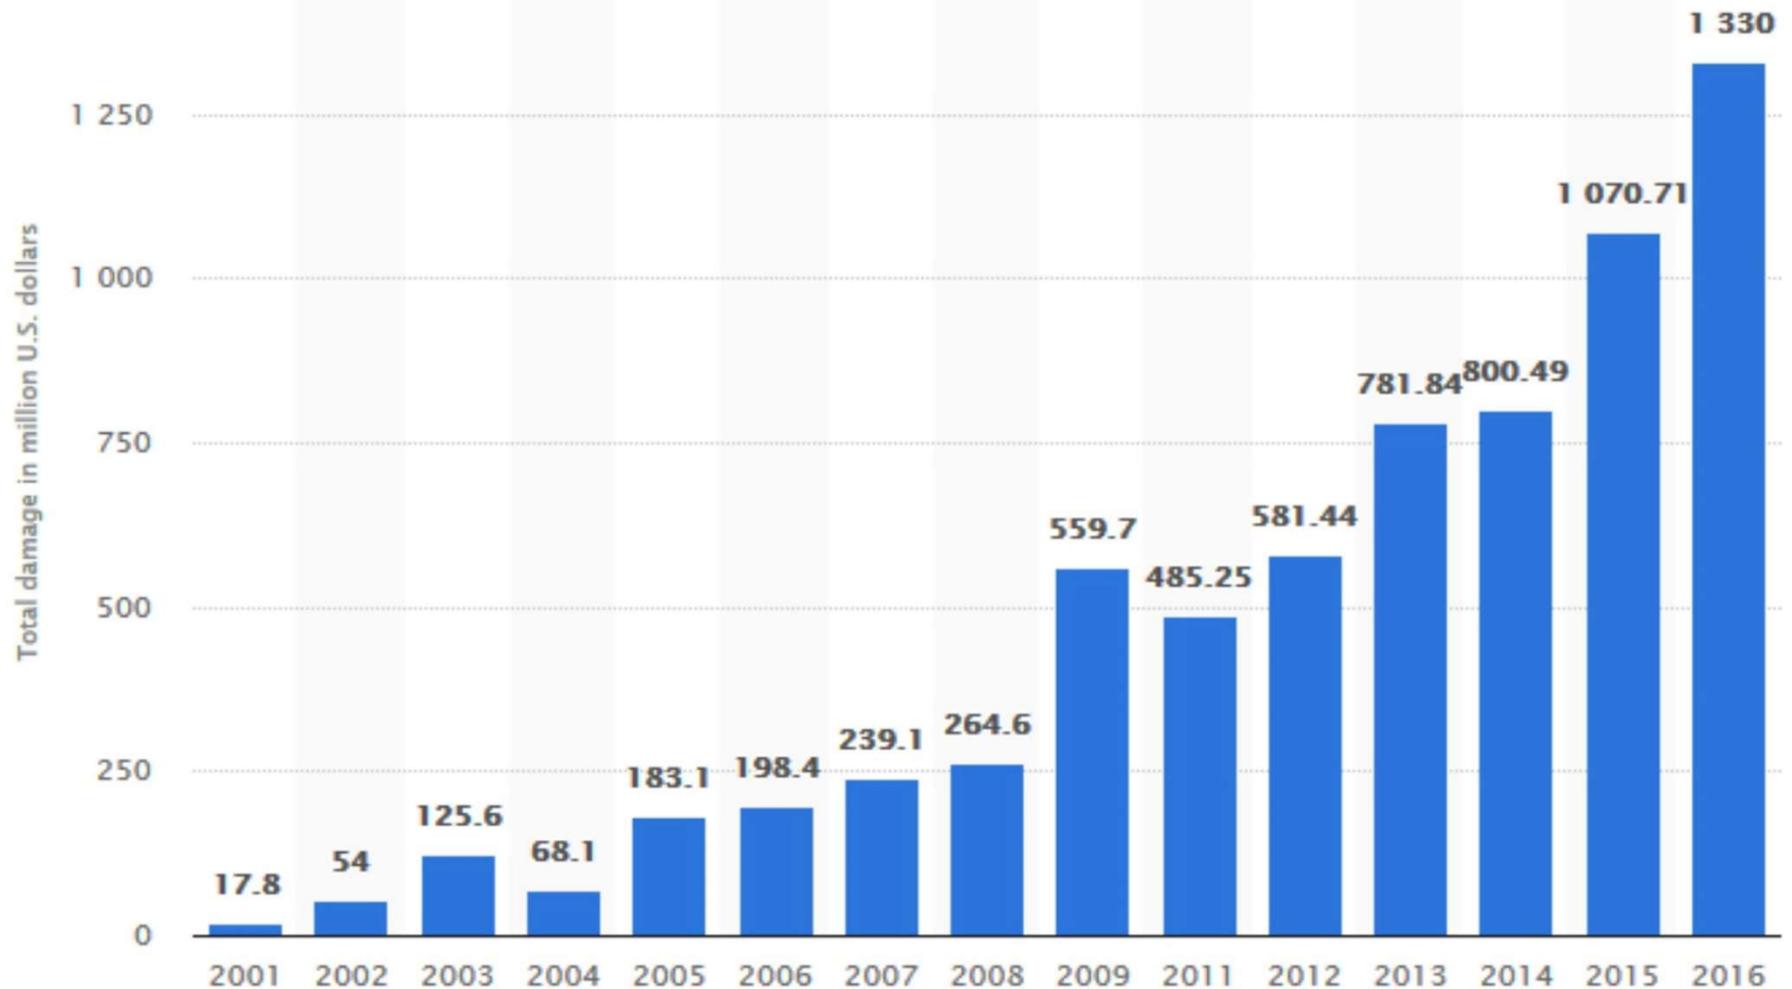

- A similar incident in the US military in 2014 - [http://www.washingtonpost.com/politics/gone-phishing-army-uses-thrift-savings-plan-in-fake-email-to-test-cybersecurity-awareness/2014/03/13/8ad01b84-a9f3-11e3-b61e-8051b8b52d06\\_story.html](http://www.washingtonpost.com/politics/gone-phishing-army-uses-thrift-savings-plan-in-fake-email-to-test-cybersecurity-awareness/2014/03/13/8ad01b84-a9f3-11e3-b61e-8051b8b52d06_story.html)

- **1997 COSAC Conference in Bunratty, Ireland (Computer Security Audit & Control Symposium).**
- **Standard (“innocent”) email messages.**
- **Utilises standard Messaging API.**
- **Utilises hidden folders.**
- **All hidden from user - eg as for Calendar updates.**
- **Covert, asynchronous, remotely upgraded, remotely removed.**
- **Defence requires code on every client to identify false messages.**
- **I-Love-You Virus (followed by the Kournikova Virus) based on some of the same vulnerabilities, but not all.**
- **What would you do?**
  1. **Keep as quiet as possible?**
  2. **Tell Microsoft under a veil of secrecy?**
  3. **Publicise as widely as possible to ensure something is done?**
  4. **Take some other action? What?**

# Rising Cost of Security Incidents

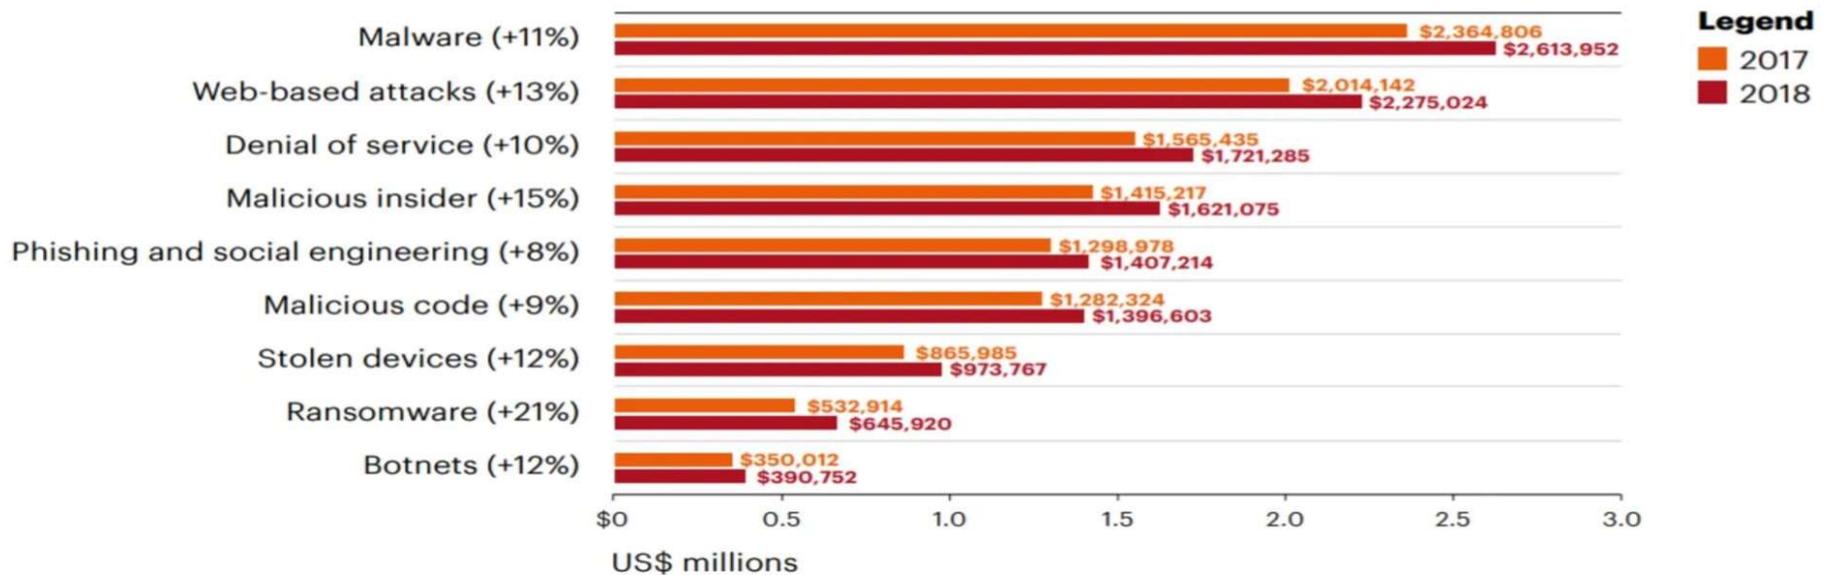

Source: <https://blog.harbinger-systems.com/2018/04/is-your-hr-mobile-app-a-gateway-for-hackers/amount-of-monetary-damage-caused-by-reported-cyber-crime/>

# Type & Cost of Security Incidents

**Average annual cost of cybercrime by type of attack  
(2018 total = US\$13.0 million)**

Source Accenture: <https://securityaffairs.co/wordpress/96531/cyber-crime/cybercrime-statistics-in-2019.html>

## Types of security incidents experienced (2015):

90% of respondents reported that they had experienced a cyber security breach or threat that compromised the confidentiality, integrity or availability of network, data or systems.

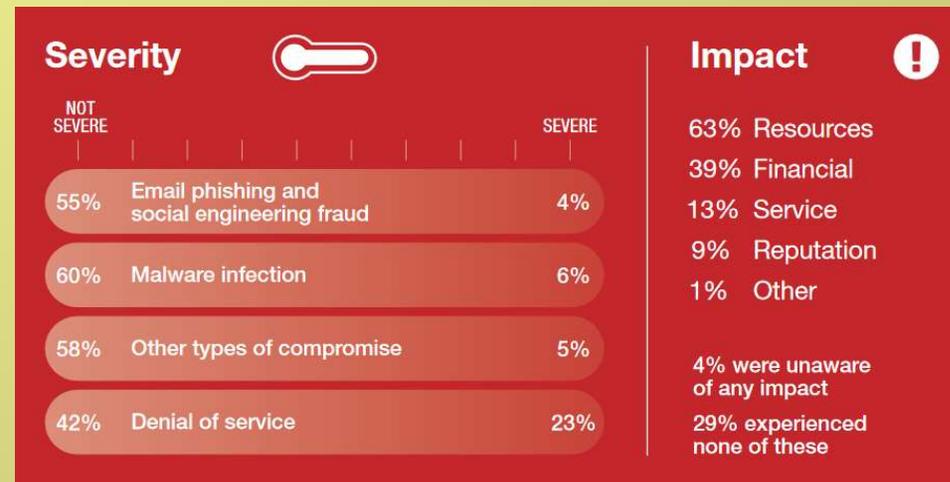

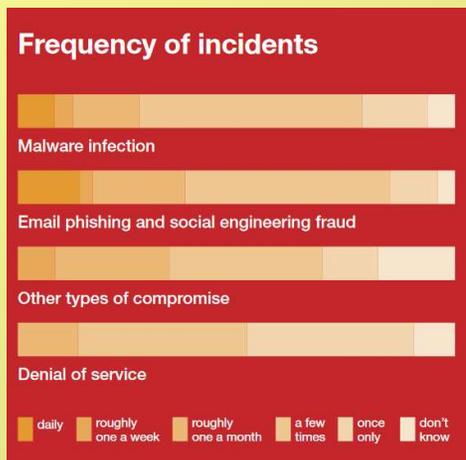

58% were successful:

42% Malware infection

42% Email phishing and social engineering fraud

20% Other types of compromise

19% Denial of service

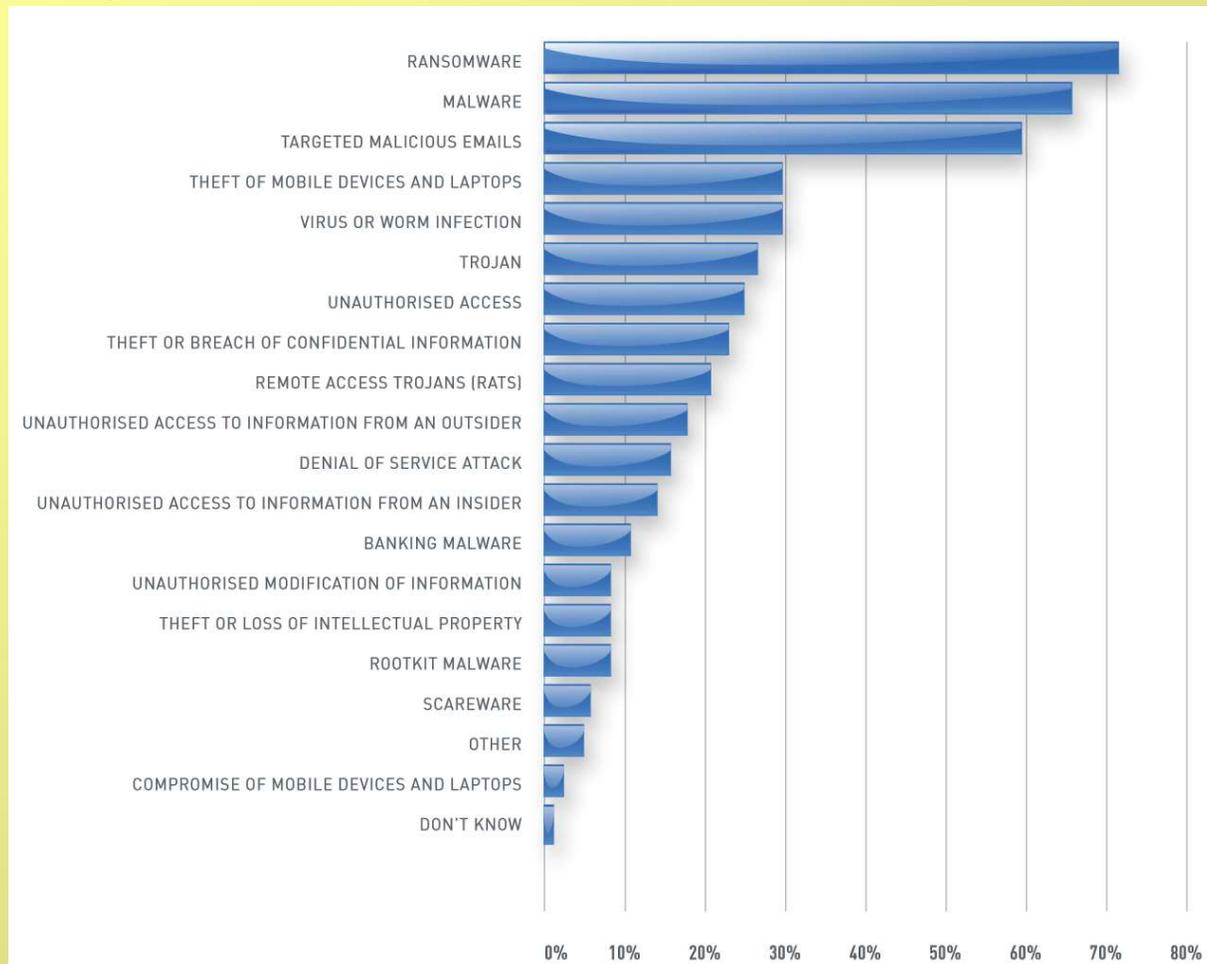

Australian Cyber Security Centre Survey, 2016, figure 9, page 32. See

- **OLD-TIME (“white hat”):**
  - ☆ **Clever, addicted, insatiable quest for knowledge, a cooperating community, advancing the cause of effective computer programming, development and use.**
  - ☆ **CERT – Computer Emergency Response Team**
  - ☆ **“Hackathons”**
- **MODERN (generally “black hat”):**
  - ☆ **Gaining access to “private” computers**
  - ☆ **Beating the “system”**
  - ☆ **Electronic graffiti**
  - ☆ **Personal gain, theft, data alteration, etc**
  - ☆ **The Hackers Handbook (1985) – Cornwall/Sommer**
  - ☆ **International crime**
  - ☆ **Espionage**
  - ☆ **The Cuckoo’s Egg (1990) – Clifford Stoll**
  - ☆ **Vandalism**
  - ☆ **“Denial of Service” attacks**

- **Ethics:**

- ✧ All information should be free
- ✧ Access to computers should be unlimited and total
- ✧ Mistrust authority – promote decentralisation
- ✧ Judge hackers by their skill
- ✧ True hackers create art and beauty
- ✧ Computers can change your life for the better

- Levy: *Hackers*

(see Open Source Initiative)

- **Rationale:**

- ✧ We’re helping to improve security
- ✧ It’s the fault of the software vendors
- ✧ It’s the fault of slack security
- ✧ We’re not doing any harm
- ✧ No-one will listen unless we take action
- ✧ It helps keep Big Brother at bay

[cf justification offered by Assange, Snowden]

## Use of Spare PC Capacity

- Setting up idle PCs so their CPU capacity can be used for “community” projects, eg:
  - ☆ SETI
  - ☆ Cancer Research
  - ☆ Anthrax Research
  - ☆ Search for Prime Numbers
  - ☆ Analysing radio-telescope data
- Harnesses dramatic amounts of processing power
- Potential breakthrough in AIDS Research already made
- Unauthorised use

What steps should be taken before using Company computers for this purpose?

See <http://www.bits.uwa.edu.au/it-help/policies> [this particular policy no longer extant]

*From Edupage, January 23, 2002*

## **RESEARCHERS RECRUIT PC USERS FOR ANTHRAX PROJECT**

**The Anthrax Research Project has launched a distributed computing project to try to develop a cure for anthrax, using computer-aided molecular analyses. Individuals can download a screen saver program and contribute some of their PC's unused processor cycles to the effort, creating a supercomputer that analyzes billions of molecules, the group said. Members of the group, including Intel, Microsoft, United Devices, the National Foundation for Cancer Research, and Oxford University, promise users that the system is secure and private. The screen saver operates whenever resources are available for computation; results are sent back to a data center run by United Devices.**

**(Reuters, 22 January 2002)**

*From Edupage, January 18, 2002*

## **CRIMINAL CHARGES SETTLED IN DISTRIBUTED-COMPUTING CASE**

**David McOwen, a former systems administrator at DeKalb Technical College in Georgia, faces a \$2,100 fine and 12 months probation for linking a number of the college's computers to Distributed.net in order to break a code using idle computing cycles. McOwen had originally faced criminal charges, because the state had determined that McOwen had used up hundreds of thousands of dollars worth of the college's computing time since installing the software in 1999. The criminal charges came as a nasty surprise to a lot of participants in distributed-computing initiatives, who are also often members of college or university computing departments. McOwen's advocates, including the Electronic Frontier Foundation, said the agreement reached between McOwen and state prosecutors was a lot better than if McOwen had been convicted in a criminal trial. Such a conviction could have landed the former systems administrator in jail for several years, on top of hundreds of thousands of dollars in restitution and fines.**

**(Newsbytes, 17 January 2002)**

## THES News Round-up: Thursday, 13 March 2003

### Scientists fine-tune hunt for ET

Radio astronomers are to focus on 150 locations in space next week in the search for ET. They have narrowed the hunt for extra-terrestrial civilisations to a selection of star systems, thanks to Seti@home, a screensaver package downloaded by more than 4 million computer users that is the world's biggest computing exercise. When no one is using their computer, it works on data from the radio telescope at Arecibo in Puerto Rico, which is sent to it over the internet.

*(Guardian)*

Article dated 30-May-11 entitled  
“Largest Telescope in the World to  
Rely on Crowdsourced Computing  
Power”.

## Other Relevant Case Studies

- A number of actual situations can be found in ACS Code of Professional Conduct Case Studies, with relevant sections of the Code identified – see [http://www.alex-reid.com/Ethics/ACS Ethics Case Studies v2.1.pdf](http://www.alex-reid.com/Ethics/ACS_Ethics_Case_Studies_v2.1.pdf).
- Several good case studies are presented in the context of the ACS Code of Ethics in the *Information Age* article below.
- Students are strongly encouraged to read these case studies.
- Burmeister, Oliver K: “Applying the ACS Code of Ethics”, *Information Age*, Feb/Mar 2001, pp54-59, and in the subsequent 3 issues (Apr/May, Jun/Jul, Aug/Sep, 2001). Also published as: Burmeister, Oliver K: “Applying the ACS Code of Ethics”, *Ethics in Computing*, v32, n2, May 2000, pp107-119.
- This analysis is based on that which first appeared in 1993 as follows:  
Anderson, Ronald E et al: “Using the New ACM Code of Ethics in Decision Making”, *Communications of the ACM*, v36, n2, Feb 1993, pp98-106.
- A selection of thought-provoking case studies were published in *Information Age* in Oct/Nov 2018 – see <https://ia.acs.org.au/article/2018/ethics-part-1--artificial-influencers.html>.
- Other helpful case studies can be found in Bynum, Terrel Ward & Rogerson, Simon, eds: “Computer Ethics & Professional Responsibility: Introductory Text & Readings”, Blackwell, 2004

# END OF LECTURES

## Bibliography

<http://www.alex-reid.com/Computer-Ethics-Bibliog.html>
